

Innovation and value creation

Karl Mahler, Head of Investor Relations Roche

Miami, March 2017

This presentation contains certain forward-looking statements. These forward-looking statements may be identified by words such as 'believes', 'expects', 'anticipates', 'projects', 'intends', 'should', 'seeks', 'estimates', 'future' or similar expressions or by discussion of, among other things, strategy, goals, plans or intentions. Various factors may cause actual results to differ materially in the future from those reflected in forward-looking statements contained in this presentation, among others:

- 1 pricing and product initiatives of competitors;
- 2 legislative and regulatory developments and economic conditions;
- 3 delay or inability in obtaining regulatory approvals or bringing products to market;
- 4 fluctuations in currency exchange rates and general financial market conditions;
- 5 uncertainties in the discovery, development or marketing of new products or new uses of existing products, including without limitation negative results of clinical trials or research projects, unexpected side-effects of pipeline or marketed products;
- 6 increased government pricing pressures;
- 7 interruptions in production;
- 8 loss of or inability to obtain adequate protection for intellectual property rights;
- 9 litigation;
- 10 loss of key executives or other employees; and
- 11 adverse publicity and news coverage.

Any statements regarding earnings per share growth is not a profit forecast and should not be interpreted to mean that Roche's earnings or earnings per share for this year or any subsequent period will necessarily match or exceed the historical published earnings or earnings per share of Roche.

For marketed products discussed in this presentation, please see full prescribing information on our website – www.roche.com

Lampalizumab: Geographic atrophy causes irreversible retinal cell death

Today, over 5 million people suffer from GA worldwide

Emicizumab in hemophilia A inhibitor patients Phase III HAVEN 1 met all endpoints

HAVEN 1

Primary endpoint

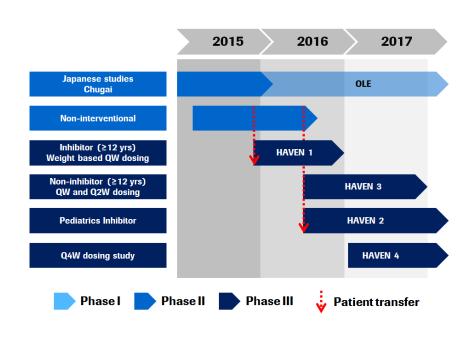

Significant reduction in number of bleeds¹

Secondary endpoints included

 Significant reduction in number of bleeds in intra-patient comparison in people who had received prior bypassing agent prophylaxis

Safety profile and sub-cut administration

- · Future trials to explore less frequent dosing
- Most common adverse events were injection site reactions, consistent with prior studies

¹ The study showed a statistically significant reduction in the number of bleeds over time in people treated with emicizumab prophylaxis compared to those receiving no prophylactic treatment. Emicizumab and its uses are investigational and have not been approved by the US Food and Drug Administration. Efficacy and safety have not been established. The information presented should not be construed as a recommendation for use. The relevance of findings in preclinical studies to humans is currently being evaluated.

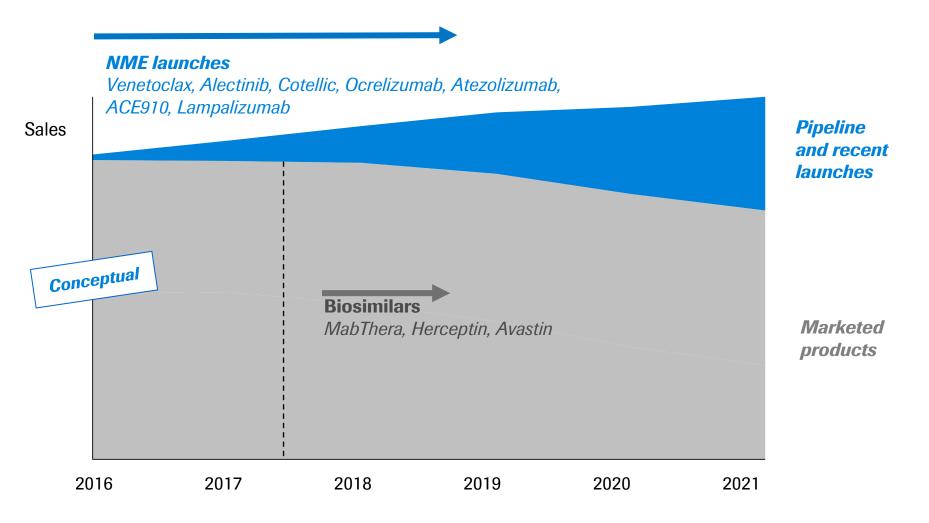

Franchises – the big three

And more on the pipeline

Strong pipeline mitigates biosimilar impact Growth driven by next generation medicines

2017 outlook

Group sales growth¹

Low to mid-single digit

Core EPS growth¹

Broadly in line with sales growth

Dividend outlook

Further increase dividend in Swiss francs

Doing now what patients need next
